POOL PRODUCTS

over 30 years service to the industry

Fabrico Sun Dome pool enclosures are easy to use pool enclosures and available for all types of pools above and inground. Some of the benefits of the Fabrico Sun Dome are:

- 1) Converts your pool into an indoor/outdoor pool - a great season extender!
- 2) Heats water and air temperature with Solar heat - saving you money and energy costs.
- 3) Protects your pool from the elements - less pool maintenance!

Since 1969, Fabrico Sun Dome has been the premier seller of solar pool enclosures around the globe. With over thirty years experience, we are committed to providing our customers with a pool enclosure that is easy to use, easy to install and gets you the most enjoyment from your pool.

Tailor Made Vinyl and Aluminum Enclosure, the Fabrico Sun Dome is a heavy 12-gauge vinyl pool enclosure that is supported by a series of aluminium tubes. The crystal clear cover is heat-sealed to fit the tubes, based on pool specifications, to provide a tailored fit for every pool size.

Sturdy Double-Zipper Doors and Windows. Each pool enclosure has one door opening with two heavy duty two-sided nylon zippers as well as one or more fibreglass screened window flaps/openings for flow-thru ventilation. Both doors and windows come with vinyl tabs to hold flaps in place.

Reduced UV Rays. While it is not intended for sun-protection, ...It will keep UV Rays out. You can get a slight tan with the dome on, but you will not get a sun burn.

No need for a Solar heat retention cover. Warming and heating is one of the key benefits to owning a Fabrico sun dome. By warming the air up to 40 deg. and the pool water with 'solar heating' up to 20 deg.F the dome will certainly reduce heating costs and the need for expensive solar covers.

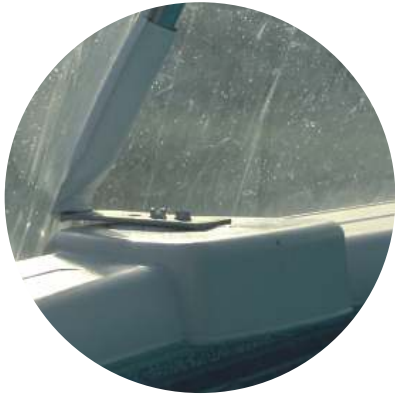

Please Note :- Fabrico sun domes are not to be used as an alternative solution to a winter debris cover. Although a dome can withstand winds up to 40-45 mph it has not been designed to withstand heavy, sustained winds or heavy snow loads.

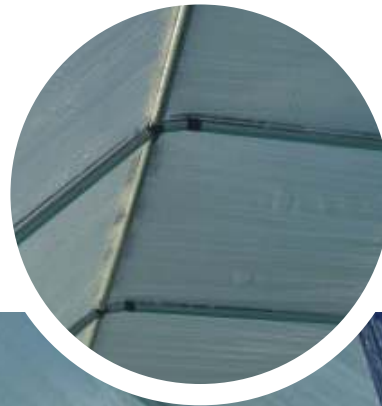

Solid and Secure Enclosure Framework The bottom edge of the enclosure is 24-gauge (double thickness) and has a series of grommets. Neoprene shock cords are then attached to the grommets and hooked onto the base of the dome. This system ensures that the vinyl enclosure is held securely over the pool framework - making the Sun Dome an extra strong framework.

Simply connects to top rail and upright support!
