WORLDWIDE LEADERS

EZ MANUAL SAFETY COVER

The manually operated EZ Fast-track cover system from Aquamatic has been designed with safety in mind. The EZ enables you to install a safety cover at 50% lower cost than conventional automated systems but with exactly the same safety benefits. Aquamatic use the same high quality fabric material and tracks that are used on their hydraulic operated system; the only difference is how the cover is mechanically taken on and off the pool by the use of two 'Ski-pole' type levers.

Apart from the safety benefit of installing an EZ Fast-track cover you also have the added benefit of being able to keep your pool clean, warm and maintenance free during the winter season. Contact your pool dealer today and join 30,000 satisfied Aquamatic owners.....worldwide!

### Mechanical Operation

- Same safety benefits as an automated cover but at a fraction of the cost!
- 50% cheaper than automated covers. Can be upgraded to automated version in the future.
- DIY installation.
- The only cover system on the market that can OPEN or CLOSE from one position.
- Can be operated sitting down. 10m pool takes approximately 60 seconds to open!
- Replaces your Solar Cover, Solar Roller and Winter Cover worth ££££'s.

# TRACK OPTIONS

## TOP TRACK - standard supply

Smooth, unobtrusive, non-trip top tracking fixed to top of coping or paving surround. Designed with little feet in mind! The EZ 'Fast-track' manual cover is supplied with a 'top track' system as standard. We advise purchasing this system should you consider installing the cover yourself. Other track designs and installation methods are available and we suggest discussing these options with your pool dealer.

Flush track receptor - additional cost

## FLUSH TRACK - optional

The EZ 'Fast-track' manual cover can also be supplied with a 'flush track' system. A polymer track receptor is required to house the track and additional site works are required to install the receptor level with the paving surround.

If you are replacing the pool coping or building a new pool we also manufacture a 'groove coping' available in 9" or 12" widths. Using 'groove copings' also has the additional benefit of being able to manually operate the cover far easier and quicker than a top track system as the cover only has to travel over 50mm of pool edging thus creating less friction and wear and tear!

# BENCH OPTIONS

600mm Drive End & 450mm Non-Drive End housings available in Synthetic Wood or Polymer (various colours).

The EZ 'Fast-track' manual cover is supplied with two mini-housings to cover the 'drive-end' and 'non-drive-end' as standard. They are available in Polymer or Synthetic Wood and are completely maintenance free!

Full bench housings are also available at additional cost. These housings cover the drive mechanisms and the roller tube and can also be used as a seating area (though not a diving platform).
